**Gambaran Manajemen Logistik Alat Kesehatan di Rumah Sakit Umum Daerah  
Rupit Kabupaten Musi Rawas Tahun 2024**  
(xv+99 halaman, 6 tabel, 4 gambar, 7 lampiran)

Manajemen logistik merupakan proses perencanaan, implementasi, dan pengendalian dari proses-proses kegiatan logistik mulai dari pengadaan, penyimpanan, penghapusan, dan pendistribusian guna memenuhi kebutuhan pelanggan. Berdasarkan survei pengambilan data awal yang telah peneliti lakukan, Rumah Sakit Umum Daerah Rupit memiliki gudang barang berkapasitas kecil yang digunakan untuk menyimpan barang tak terpakai dan alat-alat kesehatan yang rusak. Sedangkan gudang penyimpanan barang siap pakai belum ada. Untuk pemeliharaan alat kesehatan di RSUD Rupit belum optimal dikarenakan belum adanya sumber daya manusia yang kompeten di bidangnya.

Penelitian ini bertujuan untuk memperoleh informasi mendalam mengenai gambaran manajemen logistik alat kesehatan di Rumah Sakit Umum Daerah Rupit Kabupaten Musi Rawas Utara Tahun 2024. Penelitian ini menggunakan metode deskriptif kualitatif dengan wawancara mendalam, observasi dan telaah dokumen dari 1 informan kunci dan 4 informan pendukung yang dipilih secara Purposive Sampling.

Hasil penelitian didapatkan proses penyimpanan belum terlaksana dengan baik karena belum adanya prasarana gudang penyimpanan tetap dan besar, proses pendistribusian sudah sesuai perencanaan awal, proses pemeliharaan terencana sudah dilaksanakan sesuai prosedur hanya pemeliharaan tidak terencana membutuhkan waktu dikarenakan belum adanya teknisi ahli elektromedis di rumah sakit, proses pemusnahan telah dilaksanakan setiap tahunnya, proses pengendalian alat kesehatan sudah dilaksanakan dengan sistem inventarisasi sesuai pedoman dan peraturan.

Simpulan penelitian ini bahwa manajemen logistik alat kesehatan di Rumah Sakit Umum Daerah Rupit belum terlaksana dengan baik pada proses penyimpanan, pemeliharaan, dan proses pengendalian. Disarankan RSUD Rupit merencanakan pembangunan gudang aset, merekrut SDM ahli elektromedis, dan perlunya petugas melakukan pengecekan inventaris alat kesehatan secara berkala.

**Description of Medical Device Logistics Management at Rupit Regional General Hospital, Musi Rawas Regency, in 2024**  
(xv+99 pages, 6 tables, 4 figures, 7 Attachments)

Logistics management is the process of planning, implementing, and controlling the processes of logistics activities starting from procurement, storage, removal, and distribution to meet customer needs. Based on the initial data collection survey that researchers have conducted, the Rupit Regional General Hospital has a small capacity warehouse used to store unused goods and damaged medical equipment. Meanwhile, there is no storage warehouse for ready-to-use goods. The maintenance of medical devices at the Rupit Regional General Hospital is not yet optimal due to the absence of competent human resources in their fields.

This study aims to obtain in-depth information about the overview of medical device logistics management at the Rupit Regional General Hospital, North Musi Rawas Regency, in 2024. This research uses descriptive qualitative methods with in-depth interviews, observation, and document review from 1 key informant and 4 supporting informants selected by purposive sampling.

The results of the study found that the storage process has not been carried out properly because there is no fixed and large storage warehouse infrastructure, the distribution process is in accordance with the initial planning, the planned maintenance process has been carried out according to the procedure, only unplanned maintenance takes time due to the absence of expert electromedical technicians in the hospital, the destruction process has been carried out annually, the medical device control process has been carried out with an inventory system according to guidelines and regulations.

The conclusion of this study is that the logistics management of medical devices at the Rupit Regional General Hospital has not been carried out properly in the storage, maintenance, and control processes. It is recommended that the Rupit Regional General Hospital plan the construction of an asset warehouse, recruit human resources for electromedical experts, and the need for officers to check the inventory of medical devices regularly.
